

# VIVIDOL

Ethyl esters of iodized fatty acids of poppy seed oil  
Solution for Injection **480 mg I/mL**

### Approved as an oil-based radiopaque Diagnostic & Therapeutic agent for

- Liver lesion diagnosis
- Vascular embolization with surgical glue
- Conventional Trans-Arterial Chemo-Embolization (cTACE)
- Lymphography ( Chylous syndromes, obstruction & collateral flow)

**US FDA  
actives**

### Benefits of Vividol

#### Vividol in HCC

- Better arterial enhancement of tumour
- Early venous enhancement
- Complete visualisation of arterioportal vascular bed

#### Vividol in lymphangio

- Quick to find leak site
- Better real time imaging

### Why Vividol

Optimal drug delivery & dual embolization	Available in 5mL & 10mL vials Amber coloured vial for protection from light exposure
High deformability ensures optimal drug delivery at targeted site	Making expensive procedure affordable with better contrast enhancement
Radio - opaque contrast agent	Own API - Continuous supply API manufactured in USFDA approved facility
Better diagnosis, localisation & visualisation	Gives high therapeutic effect upon administration
Tumour seeker & high affinity to tumour cells	Continuous pharmacovigilance

### Route of Administration

Lymphography : Intra-Lymphatic  
In Interventional Radiology : Selective Intra - Arterial Injection
